

Soumyadeep Das

Java Full-Stack Engineer | Spring Boot | React | TypeScript | Microservices | AWS | AI-Powered Applications

Building Scalable Microservices, React Applications & AI-Powered Solutions

GitHub | LeetCode | GeeksforGeeks | LinkedIn | Email | +91 9475534952

Skills

- Java, Spring Boot, Microservices, Groovy, Grails, React, TypeScript, JavaScript, REST APIs, Spring Security, JPA/Hibernate, MySQL, Redis, Docker, AWS, Git, CI/CD, JUnit, Mockito, System Design, Multithreading, JVM, AI-Assisted Development

Experience

ValueLabs Solutions LLP – Senior Software Engineer

Hyderabad, IN

May 2024 – Nov 2025

- Reduced manual processing time from **225 days to 4 hours** by designing fault-tolerant distributed **Groovy pipelines** that processed 900K+ enterprise records.
- Increased **unit and integration test coverage** from 70% to 84% using JUnit and Mockito.
- Designed and optimized backend services for **high-volume enterprise workflows**, improving reliability and reducing execution latency.
- Integrated **AI-assisted development** workflows to accelerate automated test generation while maintaining code quality and coverage standards.
- Automated **CI/CD pipelines using Bamboo**, enabling deployment validation, monitoring AWS Elastic Beanstalk health, and post-deployment verification.
- Performed backend performance improvements through **JVM tuning** and **query optimization**.

ValueLabs Solutions LLP – Software Engineer

Hyderabad, IN

Jan 2023 – April 2024

- Owned end-to-end development of **scalable, production-grade backend microservices** using Java and Spring Boot for high-availability systems.
- Led **Java 17 upgrades** across 6+ repositories, reducing SonarQube and Snyk vulnerabilities by approximately 40%.
- Acted as a primary responder for **ServiceNow production incidents**, restoring critical services within SLA targets and minimizing business impact.
- Integrated **RESTful services** and automated **JSON/XML data processing pipelines**, enabling structured data ingestion and transformation for downstream enterprise workflows.
- Reduced **PR turnaround time** from around **3 days to 1 day** through standardized code review practices.
- Technologies: **Java, Spring Boot, Gradle, Groovy, REST, JSON, XML, ServiceNow**

Projects

AI-POWERED CODE REVIEW ASSISTANT — [Live Demo](#) | [GitHub](#)

- Developed an **AI-powered code review platform** that analyzes source code, generates automated review feedback, and provides secure role-based access through REST APIs.
- Implemented **JWT-based authentication** and authorization using Spring Security, enabling secure, stateless access control across REST APIs.
- Built **responsive React UI** featuring CodeMirror, authentication and real-time review generation.
- Designed **prompt-driven code review workflows** to analyze source code, detect potential issues, and generate actionable recommendations.
- Designed a **stateless microservices architecture** with JWT authentication, Redis caching, and Dockerized deployment for scalable code analysis workflows.
- Tech Stack: **Java, Spring Boot, React, TypeScript, MySQL, Redis Caching, Docker, JUnit, Mockito, Axios, JWT**

Education

SRM University, B.Tech in Electrical and Electronics Engineering

CGPA: 9.3 / 10.0

Tamil Nadu, IN

2019 – 2023

Achievements

- Nominated for **Star Of The Month** award at **ValueLabs** for noteworthy performance in software development.
- Achieved **Institute Rank: 43/6000+** active users on **GeeksforGeeks** web portal.
- Recipient of **15% scholarship** for **1st and 2nd year** at SRM University.
